

Nimbus Automations & Integrations

What counts as an automation

An automation is any saved trigger-and-action workflow, regardless of how many times it runs. Editing an existing automation does not count against your limit; duplicating one to create a new workflow does.

Built-in integrations

- Slack
- Google Sheets
- Gmail and Google Calendar
- Salesforce (Team plan and above)
- Custom webhooks (all plans)

Rate limits

Automations may trigger up to 1,000 times per day on the Starter plan, 10,000 times per day on the Team plan, and without a fixed daily cap on Enterprise, subject to fair-use review.
